Aldara pump pack instructions for BCC.

- Apply cream once daily for 5 days a week, usually on Monday through to Friday for 6 weeks.
- Each pump pack has approximately 24 full depressions. ½ a depression should be enough to treat one BCC.
- **At 2 weeks**, return for us to assess your response to treatment. The lesion being treated should be slightly inflamed swollen and itchy. It should not be scabbing or painful. It is not uncommon for the dose (how often you are applying the cream) to be adjusted.
- Return for immediate review if the reaction becomes very angry.
- Return for review if you feel unwell or if you feel flu-like with muscle pains.
- **At 3 months**, return to assess your response to the treatment. The skin cancer should not be visible.
